Version	Production Date: 2015-07-10 July 10, 2015, Version 5- New weights have been added.
Series	The two primary objectives of the General Social Survey (GSS) are: to gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and to provide information on specific social policy issues of current or emerging interest.
<b>Abstract</b> This is the General Social Survey Cycle 24, 2010 Time-Stress and Well-Being Main File Version 5.  This survey monitors changes in time use, including time-stress and well-being. The two primary objectives of the General Social Survey are: a) To gather data on social trends in order to monitor changes in the living conditions and well-being of Canadians over time; and b) To provide immediate information on specific social policy issues of current or emerging interest. The purpose of this survey is to better understand how Canadians spent their time. Time use estimates can be produced based on information reported in the time use diary portion of the survey. This diary provides a detailed record of participation in a wide variety of daily activities, as well as the time devoted to them, where these activities took place, and the social relationships of the respondent. Also, for the first time, the 2010 GSS collected information on simultaneous activities, i.e. those that are performed at the same time as a primary activity. The questionnaire collected additional information on perceptions of time, time spent doing unpaid work, well-being, paid work and education, cultural and sports activities, transportation, and numerous socio economic characteristics.

<b>Sampling</b>
<p><b><u>Sampling Procedure</u></b></p> <p>In the ten provinces, households will be selected for the survey by Random Digit Dialing. The telephone numbers in the sample are selected using the Elimination of Non-Working Banks technique. This sampling technique is a method in which an attempt is made to identify all working banks for an area (i.e., to identify all sets of 100 telephone numbers with the same first eight digits containing at least one number that belongs to a household). Thus, all telephone numbers within non working banks are eliminated from the sampling frame.</p> <p>Each of the ten provinces is divided into strata, i.e. geographic areas. Many of the Census Metropolitan Areas (CMAs) are each considered separate strata: St. John's, Halifax, Saint John, Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria. CMAs not on this list are located in Quebec and Ontario, and two more strata are formed by grouping the remaining CMAs in each of these two provinces. Finally, the non-CMA areas of each of the ten provinces are also grouped to form ten more strata. This gives a total of 27 strata for the provinces.</p> <p>Data for Cycle 24 of the GSS were collected in 6 waves, from January to December 2010.</p>
<p><b><u>Response Rate</u></b></p> <p>Coverage of the GSS-24 targeted population by the RDD frame is estimated to be more than 86% complete; rates of telephone service are very high in Canada. In addition, while every effort was made to avoid non-response, the non-response rate for GSS-24 was 45%.</p>
<p><b><u>Weighting</u></b></p> <p>A survey weight variable with a corresponding set of 500 mean bootstrap weight variables are provided with many GSS data files in order that a full design-based approach may be taken for doing analysis with the data.</p>

<b>Data Collection</b>	
<b>Data Collection Dates</b>	Cycle 24: start 2010-01-04 Cycle 24: end 2010-12-31
<b>Data Collection Mode</b>	Data collection was conducted by Computer Assisted Telephone Interviewing (CATI) methods in the 10 provinces.
<p><b><u>Data Collection Notes</u></b></p> <p>Responding to this survey is voluntary.</p>	
<p><b><u>Questionnaires</u></b></p> <p>Structured</p>	
<b>Data Collector(s)</b>	Statistics Canada

<b>Data Processing &amp; Appraisal</b>
<p><b><u>Estimates of Sampling Error</u></b></p> <p>These rates are high for virtually all socio-demographic groups, but are lowest among those households with the lowest incomes. As a result persons living in such households are slightly under-represented in the GSS-24 sample.</p>
